DETAILED ACTION

Status of Claims

Claims 1-6 and 9 are rejected.

Response to Amendment

The amendment of claim 1 has been acknowledged by the Examiner.

Response to Arguments

Applicant's arguments filed December 6, 2006 have been fully considered but they are not persuasive.

Applicant argues that the instant invention does not use a catalyst that has been deactivated by pretreatment or *in situ* contact with deactivating solution but instead the instant invention dopes the nickel catalyst with iron and chromium.

The Examiner contends that the prior art of record recites that the catalyst is modified using modifying agents such as $\text{CrCl}_3 \cdot 6\text{H}_2\text{O}$ and $\text{Fe}(\text{OH})(\text{Oac})_2$. It is noted by the Examiner that when doping or modifying a catalyst, you are making it less active. Therefore, either method is bound to deactivate the catalyst at least a little. So, the terms doping and modifying are taken by the Examiner to mean the same thing.

Therefore, for the reasons recited in the previous office action dated September 26, 2006 and for the reasons stated herein, the rejection of claims 1-6 and 9 under 35 U.S.C. 103(a) as being unpatentable over EP 1,503,723 is maintained.
